PROPOSAL FOR THE DEVELOPMENT AND IMPLEMENTATION OF CRIME MANAGEMENT SYSTEM ANALYSIS (CMSA)

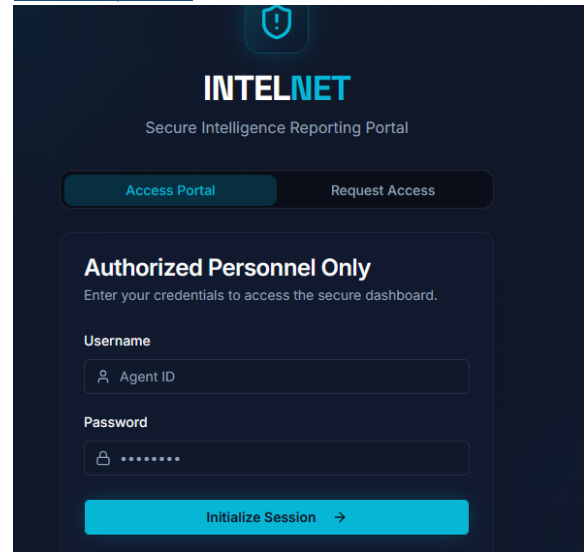

Presented to:
Kenya Police Service (KPS)

1. INTRODUCTION

The Kenya Police Service continues to face increasing demands in crime prevention, investigation, data management, and strategic deployment of officers. These challenges require a centralized, secure, and data-driven digital solution to enhance efficiency, transparency, and informed decision-making.

This proposal introduces the **Crime Management System Analysis (CMSA)**—a centralized crime management portal designed to streamline crime data collection, analysis, reporting, and inter-station coordination across the Kenya Police Service.

Admin portal

The admin portal login screen features a dark blue background with the 'INTELNET' logo at the top. Below the logo is the text 'Secure Intelligence Reporting Portal'. There are two buttons: 'Access Portal' and 'Request Access'. A section titled 'Authorized Personnel Only' prompts users to enter credentials. It includes fields for 'Username' (with a placeholder 'Agent ID') and 'Password' (with masked characters '*****'). An 'Initialize Session' button with a right arrow is at the bottom.

When you log in

Appearance of reported cases in admin

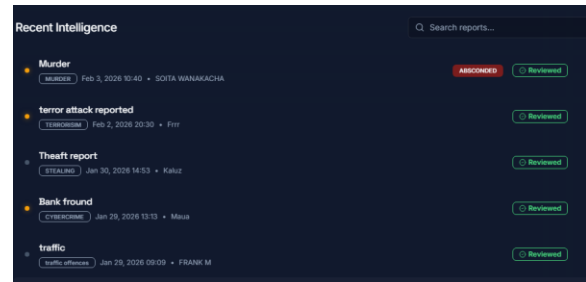

2. PROPOSED SYSTEM OVERVIEW

The **Crime Management System Analysis (CMSA)** is a secure web-based portal hosted at the **Police Headquarters (HQ) Data Center**, with controlled access from police stations countrywide.

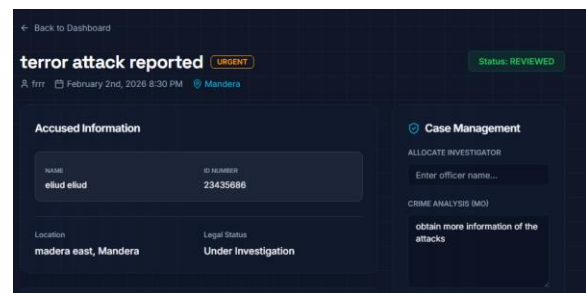

The system will implement **role-based user accounts**, ranging from:

- Station-level users
- Sub-county and county supervisors
- Regional command
- National administrators at Police HQ

This ensures data integrity, accountability, and controlled access to sensitive information.

Reports projection outlook

Incident admin only can add investigator or comment

3. CORE SYSTEM FUNCTIONALITIES

3.1 Crime Case Management

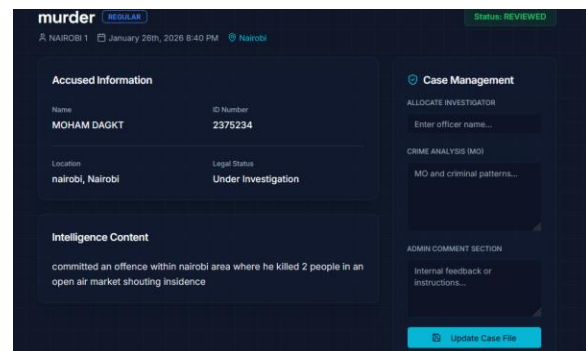

The CMSA will capture and manage:

- Cases under investigation
- Cases taken to court
- Completed cases
- Traffic offences

Each case record will include status updates, timelines, and responsible officers.

3.2 Accused Persons Records Management

- Centralized database of accused persons
- Storage of identification details and offence history
- Ability to track repeat offenders across different police stations

A **search engine** will allow officers to input:

- National ID number
- Registration or reference number

to instantly check if an individual has **previous convictions or pending cases** in any station nationwide.

3.3 Wanted Persons Module

- A continuously updated list of wanted persons
- Visible across all authorized user portals
- Enhances ease of identification and tracking

4. CRIME DATA ANALYSIS AND REPORTING

The system will generate **automated crime reports**, including:

- Daily crime reports
- Crime distribution by offence type
- Trend analysis and statistical summaries

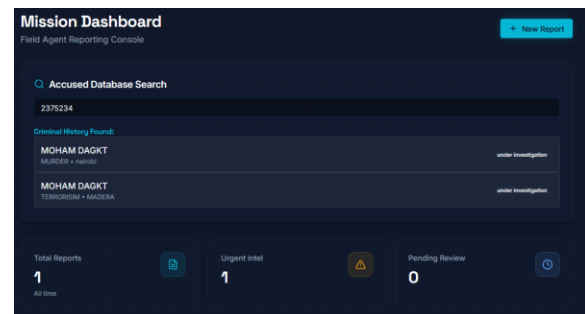

Reports will support data-driven decision-making and strategic planning.

5. GEOGRAPHICAL CRIME BREAKDOWN

CMSA will enable crime data analysis with breakdowns by:

- County
- Sub-county
- Police station
- Location
- Sub-location

This is user interface from station where you can search person's previous conviction as shown below

This is crime figure filing page

The screenshot shows the 'Submit Intelligence' form. It has a header 'File a new report to the central database.' followed by a 'Report Details' section with the instruction 'Provide accurate and verified information only.' The form includes a 'Report Title' field with the placeholder 'Subject or incident name' and a 'Crime Category' dropdown menu currently set to 'GVC'. Below this is the 'Accused Persons' section, which has an 'Add Accused' button. It contains a form for 'Person #1' with fields for 'Full Name', 'ID Number', 'Photo (Portrait)', and 'Photo URL'. At the bottom, there are fields for 'County' and 'Place of Offence'.

This will show entering crime data per crime breakdown as shown below

This screenshot is similar to the previous one but with the 'Crime Category' dropdown menu open. The menu lists several categories: 'GVC' (which is selected with a checkmark), 'DEFFILMENT', 'TERRORISM', 'MURDER', 'MANSLAUGHTER', 'CYBERCRIME', 'ASSAULT', 'ROBBERY', 'BREAKINGS', and 'STEALING'. The rest of the form structure remains the same.

Each crime record will include **map references (geospatial tagging)** showing where the offence occurred, supporting:

- Crime hotspot identification
- Better deployment and patrol planning
- Preventive policing strategies

6. OPERATIONAL BENEFITS TO KENYA POLICE SERVICE

The CMSA will:

- Improve efficiency in crime data handling
- Enhance coordination between police stations
- Support intelligent deployment of officers
- Reduce duplication of records
- Strengthen crime prevention through predictive analysis
- Enhance accountability and transparency

7. SYSTEM SECURITY AND DATA PROTECTION

Given the sensitive nature of police data, the system will incorporate:

- Secure authentication and authorization
- Role-based access control
- Audit logs for user activities
- Data encryption and secure hosting at Police HQ Data Center

The system design aligns with modern cybersecurity and digital forensics principles.

The figure below show crime breakdown according to place happened and attachment of any evidence or document as a pdf.

The screenshot shows a web interface for entering crime data. On the left, a 'County' dropdown menu is open, displaying a list of Kenyan counties: Nairobi, Busia, Siaya, Kisumu, Homa Bay, Migori (highlighted in blue), Kisii, Nyamira, and Nairobi (with a checkmark). To the right, there are fields for 'Place of Offence', 'Current Status' (set to 'Under Investigation'), and a large text area for 'Attached Evidence (PDF Only)' with an 'Attach PDF' button.

The graph below showing breakdown of cases according to area they happened for easier understanding.

8. CONCLUSION

The **Crime Management System Analysis (CMSA)** offers a scalable, secure, and data-driven solution that will significantly enhance crime management, analysis, and operational effectiveness within the Kenya Police Service.

I respectfully submit this proposal for consideration and possible pilot implementation.

The figure below will be showing crime figure flowing through the day with which will be indicate the one which is most urgent.
